After one shock...
Person collapses—suspected cardiac arrest. Unit OK. Turn unit on. Self-test; unit OK. Stay calm. Call for help. Call or send someone for help.

Prompts you may see in the LCD screen:
- Text messages
- Shock counter
- Elapsed time
- ECG waveform

Prompts you may see in the voice prompts:
- Check responsiveness.
- Shout, "Are you OK?" as you shake the person.

What you should do:
- Start CPR.
- Administer CPR: 2 breaths for every 30 compressions.

Other prompts you may hear:
- Plug in cable.
- Unit failed.
- Release shock button.
- Change batteries.

What you should do:
- Attach electrode cable.
- Turn unit off and then on.
- If unit still fails, perform CPR.
- Let go of shock button.
- Replace all 10 batteries.

What you should do:
- Open airway.
- Lift chin and tilt head back.
- Option: Place Passive Airway Support System (PASS) under shoulders to tilt head. DO NOT use PASS if suspected head or neck injury.

What you do:
- Check responsiveness.
- Shout, "Are you OK?" as you shake the person.

Check Breathing,
Look for chest rising and falling. Listen for air flow during exhalation. Feel for air flow during exhalation. Look for normal breathing, coughing, or movement. If not breathing, Give 2 Breaths, 1 second per breath (AHA Guidelines 2005 only).

Indicator light flashes.
Check breathing. Give two breaths.

Indicator light flashes.
Check responsiveness. Shout, "Are you OK?" as you shake the person.

Indicator light flashes.
Call or send someone for help.

Contraindications for use:
Do NOT use when a patient:
- Is conscious; or
- Is breathing; or
- Has a detectable pulse or other signs of circulation.

Indications for use:
Use when a patient has an apparent lack of circulation indicated by:
- Unconsciousness; and
- Absence of normal breathing; and
- Absence of pulse or signs of circulation.

When a victim is less than 8 years of age or weighs less than 55 lbs (25 kg), the ZOLL AED Plus should be used with ZOLL AED Plus Pediatric Electrodes. Therapy should not be delayed to determine the patient’s exact age or weight.

Intended user:
The ZOLL AED Plus external defibrillator is intended to be used by personnel who are qualified by training in the use of the AED Plus device and basic life support, advanced life support, or other physician-authorized emergency medical response to defibrillate victims of cardiac arrest. The CPR monitoring function provides a metronome designed to encourage rescuers to perform chest compressions at the AHA/ERC recommended rate of 100 compressions per minute. Voice and visual prompts encourage a compression depth of 1½ - 2 inches for adult patients. The CPR monitoring function is not intended for use on patients under 8 years of age.
